QSL Card Log Data
More Information

* when choosing the variant QSL card Log Data

Use the service of the DARC QSL-Service GmbH

Upload your log data via the website and we will do the rest: In a plausibility check, we check for probable plausibility and thanks to „Mapping" up to six QSOs are combined on one card - this saves printing costs. After your approval, the cards are printed directly with your ADIF data and sent and forwarded directly to the DARC QSL Bureau for redistribution ...

You would like to fill in your QSL cards yourself as usual?

No problem at all with DARC QSL-Service GmbH: On the start page, select the QSL Card Classic and design your cards individually. After uploading your motif, select the reverse side and enter your data, we will deliver your QSL cards by post for further processing at home.

Support in designing your QSL card

You already have pictures and no experience of professional design of a QSL card? Pixel, baseline grid and design principles are not familiar to you? Book our layout service for a professional processing of your card.

Advantage for DARC members and participating partner associations

Members of the DARC and/or the participating partner associations receive some benefits – more about this on the web.

See website for prices and volume discounts.

How does it work? *(german video)* **https://www.youtube.com/watch?v=N4SounwPYjA**
